The Return Value of printf and scanf

Printf 回傳值為輸出字串之字元數且包含換行符號

```c
#include<stdio.h>
#include<stdlib.h>
#include<stdint.h>
#define intt int32_t

intt main()
{
    intt a = printf("Hello World!\n");
    printf("字元數為%d\n", a);

    return 0;
}
```

```
haoching@MSI:/mnt/d/cpractice$ ./main
Hello World!
字元數為13
haoching@MSI:/mnt/d/cpractice$ |
```

Scanf 回傳值為正確輸入之資料 ex:%d 輸入為整數時+1

```c
#include<stdio.h>
#include<stdlib.h>
#include<stdint.h>
#define intt int32_t

intt main()
{
    intt a,b;
    printf("正確輸入資料為%d\n", scanf("%d %d",&a,&b));
    return 0;
}
```

```
haoching@MSI:/mnt/d/cpractice$ ./main
5 4
正確輸入資料為2
haoching@MSI:/mnt/d/cpractice$ |
```
